

a

Describe in detail what the rate of reaction graph shows.

c

Complete the formula triangle to show the formula for calculating rates of reaction.

mean rate of reaction =  $\frac{\text{quantity of product formed}}{\text{time taken}}$

Calculate the rate of reaction when:

The amount of product made is 650g and it takes 50 seconds to produce. Show your working out.

e

Describe how increasing the surface area of a solid reactant affects the rate of reaction.

Why does this happen?

f

Write down the definition of a catalyst.

How do catalysts work?

i

Discuss, in terms of collision theory, what happens to particles when they are heated.

b

Describe how sodium thiosulfate can react with HCl in a practical. Write it step by step.

d

Explain what happens when a reaction is in equilibrium.

g

What does this symbol show?

j

When concentration increases explain why rate of reaction increases. Use diagrams to help you explain.

h

What is Le Chatelier's Principle?

Give an example of a condition that could be changed.

a

Describe how marble chips and hydrochloric acid can react to produce carbon dioxide. Write it step by step.

b

How can a balance be used to measure the amount of gas being produced? Choose the correct answer.

1. The quicker the mass lost, the quicker the reaction.

2. The slower the mass lost the quicker the reaction.

3. The quicker the mass is gained the quicker the reaction.

c

I am feeling confident in the following topics...

\_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

I need to work on the following topics...

\_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

d

Draw a graph of the following results. Add a curve of best fit.

Time	Volume of gas
0	0
10	11
20	16
30	19
40	21

\_\_\_\_\_

\_\_\_\_\_

Why would you add a tangent to the graph?

\_\_\_\_\_

\_\_\_\_\_

What does the steepness of the tangent show?

\_\_\_\_\_

\_\_\_\_\_

e

How can a graph be used to calculate the mean reaction rate? Answer the question using the information:

- Work out when the reaction finished;
- Work out how much product formed;
- Divide by the time taken to finish.

The line goes flat at 70s and 80cm<sup>3</sup> of gas was produced.

Mean rate = \_\_\_\_\_

f

Sketch a graph to show a slow reaction.

\_\_\_\_\_

Sketch a graph to show a quick reaction.

\_\_\_\_\_

g

Find the mean rate of reaction between these 2 points:

At 30s, 20cm<sup>3</sup> of product had been produced and at 60s, 75cm<sup>3</sup> had been produced.

Mean rate = \_\_\_\_\_
